Friction is the force resisting the relative motion of solid surfaces, fluid layers, and material elements sliding against each other. There are several types of friction: Dry friction is a force that opposes the relative lateral motion of two Dry friction is subdivided into static friction ("stiction") between non-moving surfaces, and kinetic friction between moving ...

Regards rotation dynamics about a fixed axis, the torque & angular velocity vectors are directed "along the axis of rotation" using the right hand screw rule. But what is the direction of the angular acceleration vector? I know from F acceleration of a body is in the direction of the net force. Hence, I think it (acceleration) should be in the direction of the net torque, which ...
