Momentum is the most important quantity when it comes to handling collisions in physics.

Momentum is a physical quantity defined as the product of mass multiplied by velocity. Note the definition says velocity, not speed, so momentum is a vector quantity. This means that a 1,000-kg car moving north at 20 m/s has a different [...]

I am trying to write a VBA routine that will take a string, search a given Excel workbook, and return to me all possible matches.. I currently have an implementation that works, but it is extremely slow as it is a double for loop. Of course the built in Excel Find function is "optimized" to find a single match, but I would like it to return an array of initial matches that I can then apply ...
